SYSTEMA V4 - New framework for THERMICA

Christophe Theroude
(EADS Astrium, France)

SYSTEMA V4

New framework of THERMICA

Christophe THEROUDE, ASTRIUM Satellites

21st European Workshop on Thermal and ECLS Software
30 October 2007

All the space you need

ASTRIUM Satellites

Agenda

- SYSTEMA overview
- SYSTEMA framework presentation
 - Geometry
 - Trajectory
 - Kinematics
 - Mission
 - Processing
- On-going evolutions
- SYSTEMA V4 demonstration

All the space you need

30/10/2007 2

SYSTEMA Overview

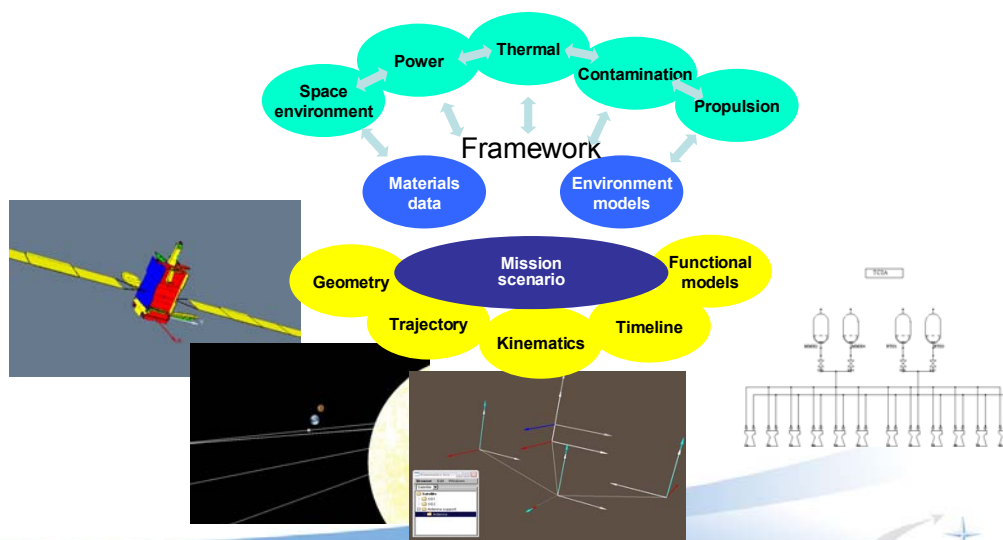

Description

- SYSTEMA permits satellite system analyses with detailed applications intended for specialists (AOCS, thermal, power ...)
- SYSTEMA embeds applications requiring: a 3D surface model of the spacecraft, the spacecraft orientation in space, space environment models.

History

- System analysis software development with ESA and CNES for more than 15 years
- SYSTEMA development company funding for more than 10 years
- Software distribution (THERMICA, DOSRAD ...) for 10 years
- Experience on observation and scientific spacecraft (HELIOS, SOHO, Mars-Express...) and telecommunication spacecraft (NILESAT, ASTRA, Intelsat, Inmost...)

SYSTEMA: an interdisciplinary tool suite

Current status of SYSTEMA

- **SYSTEMA V3**
 - Developed 10 years ago
 - Integrated framework
 - Embeds a large set of applications
 - Some applications (THERMICA) of SYSTEMA are sold
- **SYSTEMA V4**
 - Development initiated 3 years ago
 - New software technology + increased capabilities
 - Integrated framework
 - Application integration as a plug-in
 - SYSTEMA 4.2.2 released in 07/07
 - THERMICA 4.2.2 released in 07/07
 - DOSRAD 4.3 development planned by end of 2007

SYSTEMA: The key features

- **Clear separation between framework and applications**
 - Easy to develop new applications for specific use
 - Easy to maintain and make evolutions
- **Software standards based**
 - Helps exchanges between tools (XML for all input/output files, HDF5 for large computation results)
- **Modularity**
- **Rich platform support**
 - PC, Linux, SUN, HP
- **Modern and intuitive ergonomics**

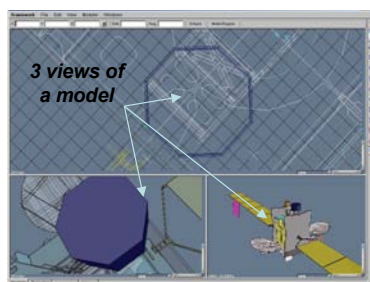

SYSTEMA framework

- SYSTEMA framework embeds in a generic environment a large suite of engineering applications
- It provides a set of basic functionalities required to make an analysis:
 - CAD import / model generation / meshing / properties / results display
 - Trajectory definition (Keplerian or general)
 - Kinematics description (pointing laws or general)
 - Mission scenario description / results display / animation
 - Processing: defining the computation case and the run parameters
- Applications are plug-in package described by XML files
- SYSTEMA framework is also a powerful stand-alone application to perform mission and kinematics analysis.

SYSTEMA Modeler

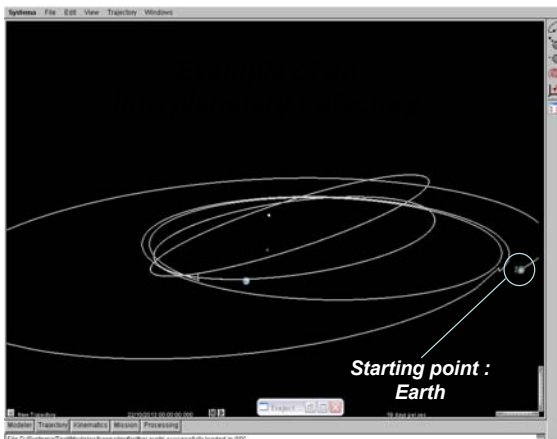

- Interfaced with several standard formats
 - STEP (CAD), unv, Nastran, IGES
- Easy model creation
 - Hierarchical description
 - Interactive shapes creation
- Easy 3D manipulation
 - Standard mouse zoom, pan, rotate
- Multi-viewers / multi-models management
 - Simultaneous points of view over a model
 - Several models can be loaded

ASTRIUM Satellites

SYSTEMA Trajectory

- Management of every planets of the solar system, Sun and moon with the real ephemerid
- Complex trajectories as a structured assembly of orbital arcs
- Arc defined either as a Keplerian arc or as a general trajectory (position, velocity)
- Functionalities in each viewport: zoom, pan, rotate, fit
- Selection of arcs in the browser or in the 3D viewer
- Animation of the spacecraft trajectory including the planets

EADS ASTRIUM

ASTRIUM Satellites

SYSTEMA Kinematics

- General definition of kinematics without the support of a geometry
- Tree of rigid moving bodies linked by degrees of freedom (and constraints)
- Compatibility with kinematics tools
- Definition of pointing laws of each moving bodies
- Definition of general kinematics laws

30/10/2007 10

EADS ASTRIUM

ASTRIUM Satellites

SYSTEMA Mission scenario

- The SYSTEMA mission scenario concept allows the user to define the whole system and the connection between the different aspects:
 - Geometrical model
 - Trajectories
 - Sequences of kinematics and pointing
- Management of a timeline, of events (eclipse...)
- Animation of the whole system
- In the future management of spacecraft modes (platform / payload usage...)

All the space you need

ASTRIUM Satellites

SYSTEMA Processing

- Interactive processing
 - Sets the applications and their properties, their input/output files...
 - A processing schematics created
 - Any mission can be chosen from this module
 - Results management

Process management

Result management

Process parameters

Available applications

Run

ASTRIUM Satellites

SYSTEMA Processing Results

- Analysis results can be displayed:
 - Text file
 - 2D table
 - 3D on animated model

EADS
ASTRIUM

ASTRIUM Satellites

On-going evolutions

- New Graphical User Interface under QT → more user interaction (12/07)
- Sophisticated camera scenario support and video recording (12/07)
 - Creation of a working/demonstration movie
- More complex shapes support (boolean cuts) (12/07)
- Integration of DOSRAD application in V4 environment
- Enhancement of mission scenario definition
 - Mission sequence
 - Improved timeline management
- And more...
